SIMPLE, EASY SUCCESS

EMERALD HARVEST®
SIMPLE, EASY SUCCESS

BASE NUTRIENTS

Base Nutrients

Cali-Pro

Our premium 2-part nutrient series is formulated for growers who like to keep it simple. Equal parts A and B in the Grow and Bloom stages of plant growth make mixing easy and consistent.

Grow, Micro, Bloom

Our premium 3-part nutrient series is for growers who want the freedom to fine-tune their feeding programs. Growers with more knowledge or experience can fine tune their nutrient needs based on plant strain, grow equipment and conditions etc.

Why purchase Emerald Harvest over another brand?

What sets Emerald Harvest base nutrients apart is that they contain the right nutrient concentrations and precise ratios. This minimizes the risk of deficiencies and ensures plants get a diet that meets their nutritional needs throughout their life cycle.

Those two phrases—"right concentrations" and "precise ratios"—are the two most important selling points of our base nutrients.

Everything in our base nutrients—and in our supplements—is formulated perfectly. And all the products in our line work together like the pieces of a puzzle.

All base nutrients on the market try to satisfy the plant's basic needs. Here's what makes ours better:

- Only the best ingredients (premium raw materials)
- Only the ideal formulations (scientifically engineered)
- The essential nutrients in the right concentrations
- The precise ratios working in tandem with our supplements
- No, or very low, heavy metal content – well below regulatory limits

Growers can rest assured they are getting the quality and purity for potent, flavorful, and safe cannabis.

What makes Emerald Harvest base nutrients work?

Using one of our base nutrient series ensures growers have their bases covered with a premium formulation of micro and macro nutrients.
For base nutrients, the 3 primary macronutrients needed for plant success are NPK:

- Nitrogen (N)
- Phosphorous (P)
- Potassium (K)

Emerald Harvest base nutrients also contain:
Secondary Macronutrients
Micronutrients

Should growers use supplements with a base nutrient?

Growers who only use a base nutrient to grow their plants can have great success with Emerald Harvest's formulations. Everything a plant needs for its entire life cycle is in the base nutrient formulas and makes growing very simple. However, supplements take plants to the next level of quality, size and potency. To achieve the maximum genetic potential of their plants, growers need to use supplements.

Then why have separate bottles?

Some nutrients react with other nutrients in a very rapid way. For example, Cali-Pro Grow and Bloom are sold as separate A and B nutrients because their ingredients react when mixed. The same is true of some of the other supplements – they must be contained separately and only mixed when ready to use and only mixed at certain stages of growth. For this reason, premium nutrients don't come in one giant bottle.

Can growers use Cali-Pro or Grow, Micro, Bloom with their current nutrient line?

If growers insist, they can combine a competitor's bloom booster or other supplement with one of our base nutrient series. However, this is what we call a Frankenstein feeding program. Growers might get decent results but to maximize their crop potential they need to use our product line (or any product line) as it was designed: as a complete feeding program. So, to ensure customer success it is beneficial to sell the entire line – not its parts.
