MYCORMAX®

Biological Root Incoulant

Mycormax is a biologically-based plant growth promoter. It contains both endomycorrhizal and ectomycorrhizal fungi, beneficial root colonizing fungi that help plants absorb nutrients and water while also providing a physical barrier against root pathogens.

How it Works

Mycormax counters degrading land fertility by restoring the soil properties needed for stabilization and an optimal growing environment by utilizing beneficial fungi to produce a self-sustaining growth process that extends root development, ensuring proper nutrition and abundant plant growth for seasons to come.

Mycormax is certified for use in commercial organic farming. It is safe to use in gardens, orchards, vineyards, homes, and yards.

Product Profile

Form: Powder
Function: Plant growth promoter
Compatibility: Works best on deciduous fruits, roses, nuts, cotton, vegetables, Sudan grass, turf grass and sod, pine and oak trees, and nursery plants
Shelf Life: 2 years

JHBiotech, Inc.
Innovation for a Greener Earth

OMRI LISTED For Organic Use

Made in USA

Advantages:

- Physical barrier against root pathogens and nematodes
- Increased absorption of essential nutrients
- Enhances root growth

Key Features

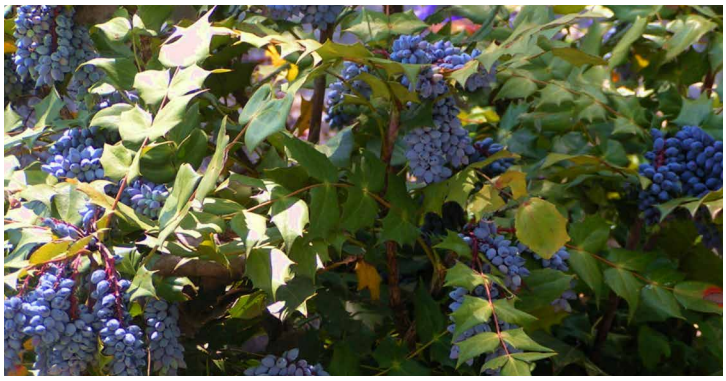

- Natural Non-toxic
- Certified for use in organic food production

MYCORMAX®
